Dr. Kaputa's Rules to Design By

❑ Selecting the right task to do is more important than doing the wrong task right.

❑ Design twice, code once.

❑ Develop (and verify) in a modular fashion.

❑ Burn down risk before it burns you.

❑ Isolation of variables is a must.

❑ Baseline your work.

❑ Save milestones as they will save you.

❑ Find your style. Listen to the experts, don't duplicate them.

❑ Say "hello world" or "blink the LED".

❑ Select tasks for the minimum winning game.

Dr. Kaputa's Rules to Design By

- ☐ Make it Work
- ☐ Make it Right
- ☐ Make it Fast
