

ICP – Find T, f and V_{peak} (O'Scope Screen)

Vertical sensitivity = 0.1 V/div.
Horizontal sensitivity = 50 μ s/div.

$$\begin{aligned} T &= 4 \text{ divisions} \\ &= 4 \text{ div} * 50 \mu\text{s/div} \\ &= 200 \mu\text{s} \end{aligned}$$

$$F = 1/T = 5 \text{ kHz}$$

$$\begin{aligned} V_{\text{peak}} &= 2 \text{ divisions} \\ &= 2 \text{ div} * 0.1 \text{ V/div} \\ &= 0.2 \text{ V or } 200 \text{ mV} \end{aligned}$$

FIG. 13.38
Example 13.13.

ICP

CONSIDER

FIND : f , ω , EQUATION

$$T = 16.67 \text{ ms}$$

$$\therefore f = \frac{1}{T} \approx \boxed{60 \text{ Hz}}$$

$$\omega = \frac{2\pi}{T} = \frac{2\pi \text{ radians}}{16.67 \text{ ms}} \quad \text{or} \quad \frac{2\pi}{T}$$

BUT $T = \frac{1}{f}$

$$\therefore \omega = 2\pi f = \boxed{376.99 \text{ rad/sec}}$$

$$E_m \sin(\omega t) \rightarrow E_m \sin(\omega t)$$

$$\Rightarrow \boxed{169 \sin(376.99 t)}$$

$$e(t) = 169 \sin(376.99 t)$$

FIND $e(t)$ AT $t = 5\text{ms}, 10\text{ms}$
 + t WHEN $e(t) = 169\text{V}, -169\text{V}$

$$e(t) = 169 \sin(376.99t) \text{ V}$$

$$t = 5 \times 10^{-3} \text{ sec} \rightarrow e(5\text{ms}) = \boxed{160.73\text{V}}$$

$$t = 10\text{ms} \rightarrow e(10\text{ms}) = \boxed{-99.33\text{V}}$$

TO FIND " t " WHEN $e(t) = 169\text{V}, -169\text{V}$:

169V: $169 = 169 \sin(376.99t)$
 $1 = \sin(376.99t)$
 $\sin^{-1}(1) = 376.99t$
 $1.5708 = 376.99t \rightarrow \therefore \boxed{t = 4.17\text{ms}}$

-169V: $-169 = 169 \sin(376.99t)$
 $-1 = \sin(376.99t)$
 $\sin^{-1}(-1) = 376.99t$
 $-1.5708 = 376.99t \rightarrow \therefore t = \underline{-4.166\text{ms}}$

RECALL $T = 16.66\text{ms}$

$\therefore t = -4.166\text{ms} + 16.66\text{ms} = \boxed{12.5\text{ms}}$

ICP – Find The Relationship Between $i(t)$ and $e(t)$, f

Vertical sensitivity = 2 V/div.
Horizontal sensitivity = 0.2 ms/div.

FIG. 13.39 Finding the phase angle between waveforms using a dual-trace oscilloscope.

$e(t)$ leads $i(t)$ by 2 divisions

**One period (T) = 5 divisions
Therefore 5 div = 360 deg**

Ratio:

**$360\text{deg}/5\text{div} = \theta/2\text{div}$
therefore**

2 divisions = 144 deg

$e(t)$ LEADS $i(t)$ by 144 degrees

$F=1/T = 1/1\text{msec} = 1\text{kHz}$
